

Authentication screen (buttons login and create)

- Press login button → takes you to login screen, input → home
 - Authentication (if email does not exist/password is wrong) → red error message
- Press create account button → takes you to create account screen, input → Home

Home screen

- MY PETS screen
- This includes a list of pets that the user can add to their home page
- There is an add button that allows the user to add their pet.
- Each pet component has a picture that can be used, a delete button, and a list button that when clicked shows a list of fields you can enter about pet info.

Explore screen

- This screen should display a search bar at the top and message about how many results there are
- When a pet picture is clicked after displaying info have option to add to “My Pets” screen (Home Screen)
- After clicking a pet sub categories appear only of that pet type (either this or allow for a filtering function) that way less screen transitions are occurring in too short of a time

Reminders screen

- Reminders Screen will initially be blank
- User will create reminders when they need to
- Upon creating a new reminder a pop up will occur which would have them fill out information

Profile screen

- The profile screen will contain the logged in user’s information
- Things like name/username/email and role will be displayed here
- The option to log out will also be here
- Upon logging out the app automatically takes us back to the login screen
